

## Contents – complete table

including table of figures

to the book publication

*„Urban Planning in the Knowledge Society“*  
*„Stadtplanung in der Wissensgesellschaft“*  
 by Bernd Streich

VS-Verlag für Sozialwissenschaften, Wiesbaden 2005  
 ISBN: 3-531-14569-X (incl. DVD-ROM)

Internet: [www.urban-is.de](http://www.urban-is.de)

This document contains the complete table of contents of the book with all subheadings and an illustration listing.

The pdf-file enables the reader to look for specific subjects by the search function of the Acrobat Reader using **keywords** like „planning“, „urban development“, „knowledge“, „GIS“, or „CAD“. The search procedure leads to the keyword(s) in the complete table of contents, or in the illustration listing, and the reader is given information about the associated page in the book text.

An alphabetically arranged index is not available, because the references in the current time of digital media by using search algorithms can be found just as good as with conventional procedures.

For obvious reasons the digitized search procedure extends exclusive to the available document and not to the entire book text.

Preface	8	
Introduction	11	
1	Terms and Systematics of Urban Planning	15
	• Overview	15
	• Planning terms in the context of the knowledge society	15
	a) Planning – short analysis of the meaning	16
	b) Planning – knowledge – knowledge society	17
	c) Additional interpretations of the planning term	22
	d) Planning as infrastructure planning	24
	e) Planning and information	26
	• Types and functions of planning	27
	• Urban planning / urban design and spatial planning in the closer sense	28

	a) Urban planning and urban design	28
	b) Urban design as science, art and politics	29
	c) Complementary terms on urban planning and urban design	30
	d) Terms beyond the bounds of Germany	31
	e) Term dualities in urban planning	32
	f) Activity dimensions within urban and spatial planning	34
	g) Subject domains of urban planning	35
	- Genealogy of the planner's self-conception	37
	- Types of planners and planning theorists	39
	- Acting figures in planning and those affected by planning	42
	- Scepticism and critique of planning	44
2	Theory of Urban Planning	47
	- Overview	47
	- Tasks and purpose of planning theories	48
	- Basic approaches to planning theories	50
	- Well-structured and badly-structured planning problems	55
	- Information theoretical and semiotic foundations of planning	57
	- Processes in urban planning	59
	a) Procedure of the general planning process	59
	b) Types of work processes in urban planning	64
	c) Planning processes according the formal regulations of the (German) planning law	64
	d) Processes of participation of several actors in planning	65
	- Models of scientific consultations for politicians in urban planning	66
	- Management of complexity within urban planning	67
	- Theoretical foundations in urban planning	70
	a) Historical urban research	71
	b) Sociological and cultural urban research	71
	c) Economical urban research	73
	d) Ecological urban research	81
	- Theory of general leading concepts in urban planning	84
	a) Phase 1: problems and conflicts as trigger	87
	b) Phase 2: searching for solution concepts	89
	c) Phase 3: establishing a consensus	89
	d) Phase 4: realization of the general leading concept	92
	- Planning ethics	93
	a) Actual tendencies of questioning in planning ethics	94
	b) Systematic of ethical approaches and implications for planning	96
	c) Ethical principles within spatial planning	102
	d) Theses to planning ethics by using information systems	104
3	Institutional Essentials of Urban Planning	107
	- Overview	107
	- Domains of urban planning	108
	- Levels of public and government's planning	110
	- Administrative and scientific institutions	116
	- Legal foundations of urban planning (Germany)	119
	a) Urban planning code	121
	b) Building law	126
	c) Land holdings and property	127
	d) Housing law	129
	e) Important sectoral planning regulations for urban planning	130

	f) Additional important legal norms for urban planning	131
	g) Technical standards (DIN), guidelines and recommendations	132
	• Structures and institutions in urban planning	132
	• The linkage of urban planning with other domains of spatial planning	136
	a) Linkage to planning systems above local planning	136
	b) Linkage to planning for special subjects	138
	c) Linkage to environmental planning	139
	d) Linkage to landscape and green space planning	140
	e) Linkage to planning in rural areas	141
	f) Linkage to preservation and maintaining of historic sites	142
	g) Cross-border planning projects	143
	• Private planning agencies	144
	• Formal and informal planning	146
	• Participation	148
	a) Theoretical foundations	148
	b) Conventional processes of participation	151
	c) Computing and planning participation	153
4	Methods of Urban Planning	155
	• Overview	155
	• Definition and characteristics of methods in urban planning	156
	a) Characterisation of methods in urban planning	156
	b) Systematic arrangement of the repertoire of urban planning methods	161
	• Qualitative methods	163
	a) Phenomenology	163
	b) Hermeneutics	163
	c) Verbal-argumentative methods	164
	d) Open interviews	164
	e) Delphi studies	164
	• Quantitative methods	165
	a) Statistical methods	165
	b) Forecast methods	166
	c) Optimization models	169
	d) Decision models	171
	e) Risk analyses	176
	f) Methods of cost calculations in urban planning	177
	g) Management techniques (operations research)	178
	h) Game theory	179
	i) Systems theory	181
	j) Graph theory and critical path method	181
	k) Cartography/planning cartography	182
	• Planning methods in the process of planning	182
	• Computer applications in the use of planning methods	186
	a) Adapting methods for the use information techniques	189
	b) Simulation methods – Computer simulations	190
	c) Media experimental methods	192
	d) Knowledge-based methods (expert systems and AI)	193
	e) Workgroup computing	196
	f) Methods of knowledge navigation in hypermedia environments	198
	g) Methods of reality virtualization	201
	• Excursus into the methods of statistics and parameter estimation	202
	a) Descriptive und inductive statistics	202
	b) Observations, data and scales	203

	c) Descriptive statistics	205
	d) Inductive statistics	212
	e) Special subjects: fuzzy data, digital filtering, data mining	214
5	Planning of Urban Structures	217
	- Overview	217
	- Definitions and foundations of urban structure planning	217
	a) Urban functionalities	219
	b) Central task of urban structure planning: optimization	220
	c) Overview to functional and land-use categories	223
	d) Influential forces to urban structures	225
	- Typologies of urban structures	226
	a) Historical references	227
	b) Geometrical typologies	228
	c) Scales	231
	d) Typologies of towns and structure patterns of settlements	232
	- Elements of urban structures	235
	a) Buildings within the urban structure and building typology	235
	b) Structure elements for trade and industry	238
	c) Traffic system and public spaces within the urban structure	240
	d) Infrastrukture and common needs	244
	e) Structure elements of the open space	245
	f) Public and private areas within the urban structure	246
	- Information technology for urban structure planning	247
	a) Planning information systems – definition and tasks	248
	b) Geographical information systems (GIS)	248
	c) Data gathering and analyses of settlements and spatial structures	254
	d) Monitoring of land-use and spatial relations in the flow of time	258
	e) Population structure and population trend	259
	f) Urban planning parameters and estimation sizes	262
	g) Data about urban economy	266
	h) Environmental information	267
	i) Information about the future: forecasts and projections	269
	- Main concepts for urban structures	269
	a) General principles and models of structuring	269
	b) Matters of realization and instruments of the urban structure planning	277
	- Designing of urban structures	279
	a) The design process for urban structures	280
	b) Design approaches	280
	c) Site suitability and land-use (functional) suitability	285
6	Planning of Urban Design	289
	- Overview	289
	- Perception of space and form	290
	a) Definitions to space and form	291
	b) Definition of space within spatial planning	293
	c) Theoretical aspects to the perception of space and form	295
	- Data gathering of space and evaluation	300
	a) Site analysis	301
	b) Space-form-analysis, analysis of design value, and emotion analysis	303
	c) Sequence analysis ('townscape analysis')	304
	d) Image analysis of urban areas and psychological methods	306
	e) Shape-layer analysis	308

f) Demarcation of form-quality areas	310
g) Historical methods of analyses for urban and architectural design	311
h) Photographical and photogrammetrical methods of data gathering	313
i) Analyses of urban form by simulation methods	315
j) Informational aesthetics: about the erring way in quantification of the beauty	319
- Elements of urban design	321
a) Basic typology	321
b) Buildings, architecture and building ensembles	322
c) Squares, square sequences, and street spaces	324
d) Elements of green design and water as design resource	325
e) Furnishing elements for streets, squares and spaces	326
- Methods of urban design planning	326
a) Origin and typology of the repertoire of methods	326
b) Competitions for urban design and conceptual frameworks	331
c) Urban overall plans	332
- Computer-aided design	333
a) Types of CAD-models	334
b) Generative and knowledge-based methods	338
- Concepts and instruments of urban design	340
a) Architectural culture	341
b) Urban design principles	341
c) Assertive urban design planning and avert of urban disfigurement	345
d) Statutes for urban design regulations	346
- The process of urban design	348
a) Methodical guiding principles	349
b) Experimental studies	351
7 Formal Land-Use Planning (Germany)	353
- Overview	353
- Systematical framework of the formal land-use planning	354
a) Permissibility of building projects	354
b) Two types of urban land-use plans	360
c) Landscape plans, green order plans, and environmental planning	363
- Computer application for the formal land-use planning	365
a) Hypermedia for knowledge organisation	366
b) Dynamic control of processes	367
c) Handling of semantic information	368
d) Digital authentication	369
- The land-use plan	370
- The legally-binding land-use plan	374
- Procedure of plan preparation	380
a) Evaluating of the necessity and set-up decision	381
b) Participation of authorities and agencies for matters of public concern	384
c) Public participation	385
d) Approval decision and disclosure of the plan	388
e) Handling and reacting of plan suggestions	389
f) Final decision and public notice	390
g) Monitoring	391
- Institutions and people acting in the process of formal land-use planning	391
- Weighting of the interests	393
a) Principles of weighting	394
b) Phases of weighting	396
c) Weighting errors	397

	d) Usage of information technology	398
	- Safeguarding and realization of the land-use planning	399
	a) Reorganization of land holdings – property reallocations and adjustment of plot boundaries	400
	b) Land expropriation and compensation	402
	c) Site related public infrastructure	403
	d) Urban development contracts	407
	e) Compensation measure	408
	f) Urban development enforcement orders and preservation statutes	408
8	Urban Renewal	411
	- Overview	411
	- Reasons and tasks for urban renewal	412
	a) Urban renewal in the history of urban planning and design	412
	b) Reasons to urban renewal	415
	c) Two central contexts and points of focusing to urban renewal	417
	d) Tasks and fields of acting for urban renewal	418
	- Urban re-development by law regulations (Germany)	420
	a) Phase of preparation	421
	b) Phase of realization	422
	c) Phase of conclusion	423
	- Urban renewal and preservation of historic sites	424
	a) Historical evolution of the idea of preservation of historic sites	424
	b) Laws for preservation and maintaining historic sites and buildings	427
	c) Evaluation criteria for culturally important monuments and buildings	429
	d) Activities for handling of building of historic importance	431
	e) From single building to towns of historic importance	432
	f) Guidelines to preservation in urban renewal	435
	g) Use of technology for registration of buildings/sites and inventory	436
	- Framework of urban renewal and experimental design studies	437
	a) Traditional method of conceptual frameworking	437
	b) Computer-aided experimental design studies for urban renewal	439
	- Individual topics of urban renewal	440
	a) Urban design change	441
	b) Urban repair and reconstruction	441
	c) Regeneration, rehabilitation, and revitalization	442
	d) Site recycling und conversion	443
	e) Internal development and the problem of functional mixture	445
	f) Site management and the use of GIS	446
	- Excursus: rural village renewal	448
	a) Characteristics and typologies of rural villages	449
	b) Legal and administrative general framework	452
	c) Typical measure of rural village renewal	453
	- Tendencies in urban renewal	456
	a) Urban renewal as urban development	457
	b) Consequences from the demographic trends	458
	c) Cultural sustainability	458
	d) Preservation of form/design and ecology	460
	e) Authenticity and simulation	461
	f) Social requirements within urban renewal	462
	g) Local entrances and 'town in between'	462

9	Urban development	465
	- Overview	465
	- Facets of the term 'urban development'	466
	a) Genealogy of the term 'development'	468
	b) Growth and progress as paradigm of development	470
	c) Critical distance and counter-arguments	472
	d) Ambivalence by using the term of 'development'	473
	- Determinants of urban development	473
	a) Theories on urban development	476
	b) Population development and urban development	480
	c) Economic development and urban development	484
	d) Infrastructure and urban development	487
	e) Cultural mixture and creativity as driving force of urban development	487
	- Urban development planning	489
	a) Urban development planning from the strategic point of view	491
	b) Urban development planning from the organizational point of view	492
	c) Urban development planning from the methodical point of view	493
	d) Urban development planning and computing	494
	- Development activities according to the urban planning regulations (Germany)	503
	a) Phase of preparation	505
	b) Phase of realization	506
	c) Phase of conclusion	507
	- Possible items to initiate new urban development concepts	508
	a) Urban development within the economy of attention	508
	b) Sustainable urban development	510
	c) Urban regions	512
	d) Events and endogenous potentials	514
	e) Urban development by urban renewal	516
	- Scenarios and theoretical models for future urban development	518
	a) Growth and shrinkage	519
	b) Models for further discussions to 'town in between'	524
	c) Urban development in the knowledge society	526
10	International References in Urban Planning	531
	- Overview	531
	- International relationships	532
	a) Looking backwards	532
	b) Towns in global competition	535
	- France	537
	- Great Britain	541
	- Netherlands	547
	- Sweden	551
	- USA	553
	- South Africa	558
	- South Korea	562
11	Utopian Thinking in Urban Planning	567
	- Overview	567
	- Town and Utopia – town planning for utopia?	568
	a) Utopias within literature	569
	b) Typologies of utopias	573
	c) The standpoints of utopians to town planning	577
	d) The town in the centre of hope projections	580

e) Urban planners as utopians	585
- Brief outline of urban utopias	589
a) Prehistoric epoch and early high cultures	589
b) Urban design of the Classical Antiquity – polis-utopia and geometrical town design schemes	590
c) Urban design in the Middle Ages – transcendently utopias and compactness in urban design	592
d) Renaissance and absolutism – prime-age of utopias and ideal city schemes	595
e) Town foundations in the New World – realization of utopian dreams through urban design	597
f) Epoch of the modern age and industrialization – technological progress, urban growth and social-utopian driving forces	599
g) Postmodernism and second modern age – plurality and turning away from monistic urban design utopias	602
h) Knowledge society – complexity handling and urban design utopias beyond geometrical schemes	604
- New crystallization points for urban utopias?	606
a) Themes and trends under the view of utopian crystallization points	607
b) Starting-point for urban utopias: the ascetic town	609

<i>Abb. 5.6: Christopher Alexander's pattern no. 8 „Mosaic of Subcultures“</i>	234
<i>Abb. 5.7: Types of residential buildings and density data</i>	237
<i>Abb. 5.8: Traffic flows within the cell structure of an urban area</i>	241
<i>Abb. 5.9: Network and elements of local traffic infrastructure</i>	242
<i>Abb. 5.10: Alignment plan – „Fluchtlinienplan“ – to the urban extension for Berlin from the 19th century with strict separation of public and private land-use types</i>	246
<i>Abb. 5.11: Components of a GIS</i>	249
<i>Abb. 5.12: Prinziples of vector graphics and raster graphics</i>	250
<i>Abb. 5.13: Storing of raster data</i>	251

<i>Abb. 5.14: Types and models of databases</i>	252
<i>Abb. 5.15: GIS-analyses on raster base</i>	253
<i>Abb. 5.16: GIS-analyses on vector base</i>	254
<i>Abb. 5.17: Prinziples of remote sensing with regard to gather spatial information for GIS-use</i>	255
<i>Abb. 5.18: Monitoring of utilization change in case of the municipal system for planning information of the provincial capital Munich</i>	257
<i>Abb. 5.19: Image sequence of a dynamic GIS demonstrated with the example of the city of Cologne</i>	258
<i>Abb. 5.20: The Lexis-diagram for illustration of life occurrences for single persons and groups of persons (cohorts)</i>	260
<i>Abb. 5.21: The cohort-component-model (with 10-years cohorts)</i>	261
<i>Abb. 5.22: Leslie-matrix for calculations of population forecasts</i>	262
<i>Abb. 5.23: Set of selected planning parameters in the sector of social infrastructure</i>	265
<i>Abb. 5.24: Illustration of the transformation of urban structures with the tentative finish as fractal pattern of the knowledge and information society</i>	267
<i>Abb. 5.25: Analyses of urban climate as part of urban structure planning for Stuttgart</i>	268
<i>Abb. 5.26: Ebenezer Howard's garden city concept</i>	270
<i>Abb. 5.27: Structuring of neighbourhood units after Perry</i>	271
<i>Abb. 5.28: The linear city concept of A. Soria y Mata</i>	272
<i>Abb. 5.29: The axis concept for Hamburg of F. Schumacher and the 'finger' -plan for Kopenhagen</i>	273
<i>Abb. 5.30: Reichow's diagram for the explanation of an „organic urban design“</i>	274
<i>Abb. 5.31: Urban structure plan to the capital functionalities for Berlin</i>	278
<i>Abb. 5.32: Generating of a urban structure concept in due consideration of spatial and structural obligations</i>	279
<i>Abb. 5.33: The hierarchical design method of C. Alexander as preliminary stage of the „pattern language“ afterwards</i>	282
<i>Abb. 5.34: Relations matrices, the design of urban structures, building floor plans and the use of the linear graph theory</i>	283
<i>Abb. 5.35: Urban structure planning by complex suitability evaluation</i>	286
<i>Abb. 5.36: Method of creation of urban structure and land-use plans</i>	288
<i>Abb. 6.1: Holistic as main feature of urban form ('Gestalt') in opposition to simple collection or aggregation</i>	291
<i>Abb. 6.2: 29 aspects of studies to the subject-matter 'space' by A. Gosztonyi</i>	293
<i>Abb. 6.3: Process of perception and change of urban form</i>	299
<i>Abb. 6.4: 'Site analysis' for urban structure and urban form by using computers</i>	302
<i>Abb. 6.5: Analysis of urban form qualities demonstrated for the midtown of Werne by using the criterion of 'dominance'</i>	303
<i>Abb. 6.6: Place Stanislas and Place de la Carrière in Nancy</i>	304
<i>Abb. 6.7: Method of sequence analysis after Lynch/Hack and Cordon Cullen</i>	305
<i>Abb. 6.8: 'Mental map' of Boston after research study by recording of trained observers</i>	307
<i>Abb. 6.9: Layer analysis demonstrated with the example of building facades</i>	309
<i>Abb. 6.10: Method of delimitation of urban form areas demonstrated with the example of Koblenz-Ehrenbreitstein</i>	311
<i>Abb. 6.11: Simulation of the roman fort in Xanten</i>	313
<i>Abb. 6.12: Principle of the architectural photogrammetry</i>	314
<i>Abb. 6.13: Types of visual simulations for urban design</i>	316
<i>Abb. 6.14: Combination of simulation methods: physical models and endoscopy; CAD-visualisation and physical models</i>	317
<i>Abb. 6.15: Three-dimensional computer simulation of the Dresden Neumarkt as 'virtual reality'-scene by choosing different view points for an internet presence</i>	318
<i>Abb. 6.16: Principle of the method of information aesthetics</i>	320
<i>Abb. 6.17: Typology of urban design components in their three-dimensional form of appearance after Humpert</i>	323
<i>Abb. 6.18: Advices for street space design for historical building areas near city</i>	

centres after „EAE 1985/1995“	325
Abb. 6.19: <i>Ichnographia, orthographia and scenographia after Vitruv</i>	327
Abb. 6.20: <i>Example of a determined design solution by restrictions after Broadbent</i>	329
Abb. 6.21: <i>Building-related spatial concept of a urban framework</i>	332
Abb. 6.22: <i>CAD-types of modeling as foundation for computer-aided methods within the urban design planning</i>	335
Abb. 6.23: <i>Simulation of urban design by CAD volume modeling</i>	336
Abb. 6.24: <i>Example of a „shape grammar“ with demonstration in urban design</i>	339
Abb. 6.25: <i>Skyscraping projects as object of urban design planning</i>	343
Abb. 6.26: <i>Planned urban design project after the principles of „new urbanism“ in the Tacheles-district of Berlin; after design of A. Duany</i>	344
Abb. 6.27: <i>Visualised explanatory statements for rules in design statues demonstrated with the example of Lübeck</i>	347
Abb. 6.28: <i>Design work for smaller urban areas; first sketch of the adjacent insertions, orientation and street-system including sketching of building relations</i>	350
Abb. 6.29: <i>Generating of an urban area by media-experimental methods: process of generating and visualization of the result</i>	351
Abb. 7.1: <i>Different spatial parts in the categories of the formal land-use planning</i>	355
Abb. 7.2: <i>Permissibility of build-up projects after the systematics of the urban planning code</i>	357
Abb. 7.3: <i>Distribution of the number of building permissions in the four cases of permission requirements of the urban planning code</i>	359
Abb. 7.4: <i>The two types of land-use plans</i>	361
Abb. 7.5: <i>Example of a landscape plan</i>	364
Abb. 7.6: <i>Land-use plan of Mainz</i>	371
Abb. 7.7: <i>The use of a computer-assisted system in the process of land-use plan preparation</i>	373
Abb. 7.8: <i>3D-Visualization of a land-use area with corresponding urban design concept and legally-binding land-use plan (graphic part)</i>	375
Abb. 7.9: <i>Mask for designated settings for legally-binding land-use plans</i>	376
Abb. 7.10: <i>Systematics and calculation formulas to set the degree of building and land use in legally-binding land-use plans</i>	377
Abb. 7.11: <i>The use of computer-assisted systems in the process of preparation of legally-binding land-use plans</i>	379
Abb. 7.12: <i>Step-by-step procedure in preparation of formal land-use plans</i>	383
Abb. 7.13: <i>Participation of institutions and people acting in the process of formal land-use planning by using the internet technology</i>	385
Abb. 7.14: <i>Public participation in the framework of a municipal information systems for citizens</i>	387
Abb. 7.15: <i>Adding of a planning actor within the schema of a workflow-management systems for the formal land-use planning</i>	392
Abb. 7.16: <i>Prinziple of the reorganization of land holdings by property reallocations and adjustment of plot boundaries</i>	401
Abb. 7.17: <i>Terms of the site related public infrastructure</i>	404
Abb. 7.18: <i>Example of the costs' distribution for site related public infrastructure by using the sample statue for site related public infrastructure</i>	406
Abb. 8.1: <i>The big burn of Hamburg 1842: photographic document after the fire and the reconstruction plan with radical measures of re-development in the city centre of Hamburg</i>	414
Abb. 8.2: <i>Procedure of an urban re-development with 3 main steps after the urban planning code</i>	421
Abb. 8.3: <i>Ratzeburg as a town of historic importance</i>	433
Abb. 8.4: <i>Urban framework for the renewal of Koblenz-Ehrenbreitstein</i>	438
Abb. 8.5: <i>Design of an urban concept by computer-aided experimental studies demonstrated with a building block in the city centre of Bonn</i>	440

<i>Abb. 8.6: Handling of suspected hazardous sites in urban planning</i>	443
<i>Abb. 8.7: Conversion of a former railway area in Kaiserslautern</i>	444
<i>Abb. 8.8: Internet presence of the management system for potential infill sites of Berlin</i>	448
<i>Abb. 8.9: Types of rural villages</i>	451
<i>Abb. 8.10: The rural village of Forst/Weinstraße after successful village renewal</i>	455
<i>Abb. 9.1: Phases of development of urban systems after Herbert/Thomas</i>	477
<i>Abb. 9.2: Population development and population projection demonstrated with the example of Frankfurt a.M. and region</i>	480
<i>Abb. 9.3: Change of a population pyramid on the base of a stochastic model</i>	482
<i>Abb. 9.4: On the relevance of migration proportions for a town</i>	483
<i>Abb. 9.5: Example of the organizational embedding of the urban development planning within the hierarchy of a city's municipality</i>	492
<i>Abb. 9.6: Internet presence of the city of Regensburg to the urban development plan</i>	494
<i>Abb. 9.7: Simulation model POLIS: Co-action of the components within the context of urban development and the model dimensions</i>	497
<i>Abb. 9.8: Components and inherent process of the simulation model SIARRSY</i>	498
<i>Abb. 9.9: Monitoring of the change of buildings' use with a GIS as basis for the urban development planning in Munich</i>	499
<i>Abb. 9.10: Public participation as part of the urban development planning in Pittsburgh</i>	501
<i>Abb. 9.11: Computer simulations of urban development processes: GIS-based simulation of land coverage in the urban region of Stuttgart; modeling of urban sprawl on the base of a 'town generator'</i>	502
<i>Abb. 9.12: Procedure of a urban development planning after the urban planning code</i>	504
<i>Abb. 9.13: Urbanization world-wide: growth of cities in a continental comparison between 1950 and 2000; growing and shrinking cities in a global comparison with projections into the year 2010</i>	520
<i>Abb. 9.14: Graphical sketches of models for handling urban shrinking processes to the city of Leipzig</i>	521
<i>Abb. 9.15: Comparison of planning characteristics for growing and shrinking cities</i>	523
<i>Abb. 9.16: Illustration of the 'in-between city' phenomenon demonstrated with the example of the Stuttgart region by Thomas Sieverts; network of settlement areas and open space elements; display of the close mashed penetration of forests and settlement areas</i>	525
